RESUME

Machine Learning Engineer / AI Researcher with practical experience in developing solutions in areas such as predictive maintenance, time series, and recommendation systems. In addition to my professional work, I enjoy developing personal projects in other areas of computer science, such as systems programming, full-stack web development, and video game development.

EDUCATION

Master's Degree in Artificial Intelligence Research, Menéndez Pelayo International University
10/2025 – 06/2026 | Online

Bachelor's Degree in Computer Engineering,, University of Córdoba
09/2021 – 06/2025 | Córdoba, Spain

Software Development, Munster Technological University
09/2024 – 12/2024 | Cork, Irlanda
Erasmus Exchange Program

LANGUAGES

Spanish: Native
English: B2 Level (Cambridge)

PERSONAL PROJECTS

GPoeTry 🌐, Python
Implementation of a GPT model to generate poetry in Spanish.

Infers 🌐, Rust
A simple inference engine for ONNX models.

UcoRecSys 🌐, Python
Deep learning-based recommendation system.

MiniNN 🌐, Rust
Minimalist deep learning library for Rust.

Raylife 🌐, C
Basic implementation of Conway's Game of Life using raylib.

Bayesian Emotions 🌐, Python
Simple implementation of a Naive Bayes classifier for sentiment analysis in movie reviews.

PROFESSIONAL EXPERIENCE

ML Engineer | AI Researcher, KDIS Research Group (University of Córdoba)
01/2026 – Present | Córdoba, Spain

- Contributed to applied research projects using real-world operational and industrial data across multiple domains, including predictive maintenance, system diagnostics, time series forecasting, drowsiness detection, and e-learning recommendation systems.
- Designed and implemented end-to-end machine learning pipelines, including data preprocessing, feature engineering, model development, and performance evaluation, in both industrial and user-focused environments.
- Developed and optimized predictive models by combining traditional methods with deep learning approaches (RNNs, LSTMs), and applied advanced architectures such as CNNs for computer vision detection tasks and GNNs/Transformers for recommendation systems.

Computer Engineering Intern, Magtel
02/2025 – 05/2025 | Córdoba, Spain

- Developed and deployed predictive AI models (regression and time series forecasting), supporting data-driven decision-making in internal projects.
- Produced detailed technical documentation covering algorithm design, validation processes, and deployment strategies.
- Collaborated with the R&D department in the preparation of funding proposals for new AI-driven projects.

SKILLS

Soft Skills: Teamwork | Continuous learning | Self-taught learning | Problem-solving | High sense of responsibility | Adaptability | Communication skills

Technical Skills: Artificial Intelligence | Machine Learning | Deep Learning | Data Science | Recommender Systems | Time Series Analysis | Predictive Maintenance | Feature Engineering | Model Evaluation and Validation | Hyperparameter Optimization | Supervised, Unsupervised, and Semi-supervised Learning | Contrastive Learning | NLP | LLMs | MLOps | Algorithms | Data Structures | OOP | Software Engineering Principles

Programming Languages: Python | Rust | C | C++ | Java | JavaScript | TypeScript | SQL | PL/SQL | PHP | LaTeX

Frameworks & Tools: PyTorch | TensorFlow | Lightning | MLFlow | Weights & Biases | ONNX | Scikit-learn | NumPy | Pandas | Matplotlib | FastAPI | Laravel | Node.js | React | Astro | Express.js | Spring Boot | MySQL | MariaDB | SQLite | PostgreSQL | TimescaleDB | Elasticsearch | Redis | Git | GitHub | Docker | MinIO
